

# OUR **GREEN CODE**

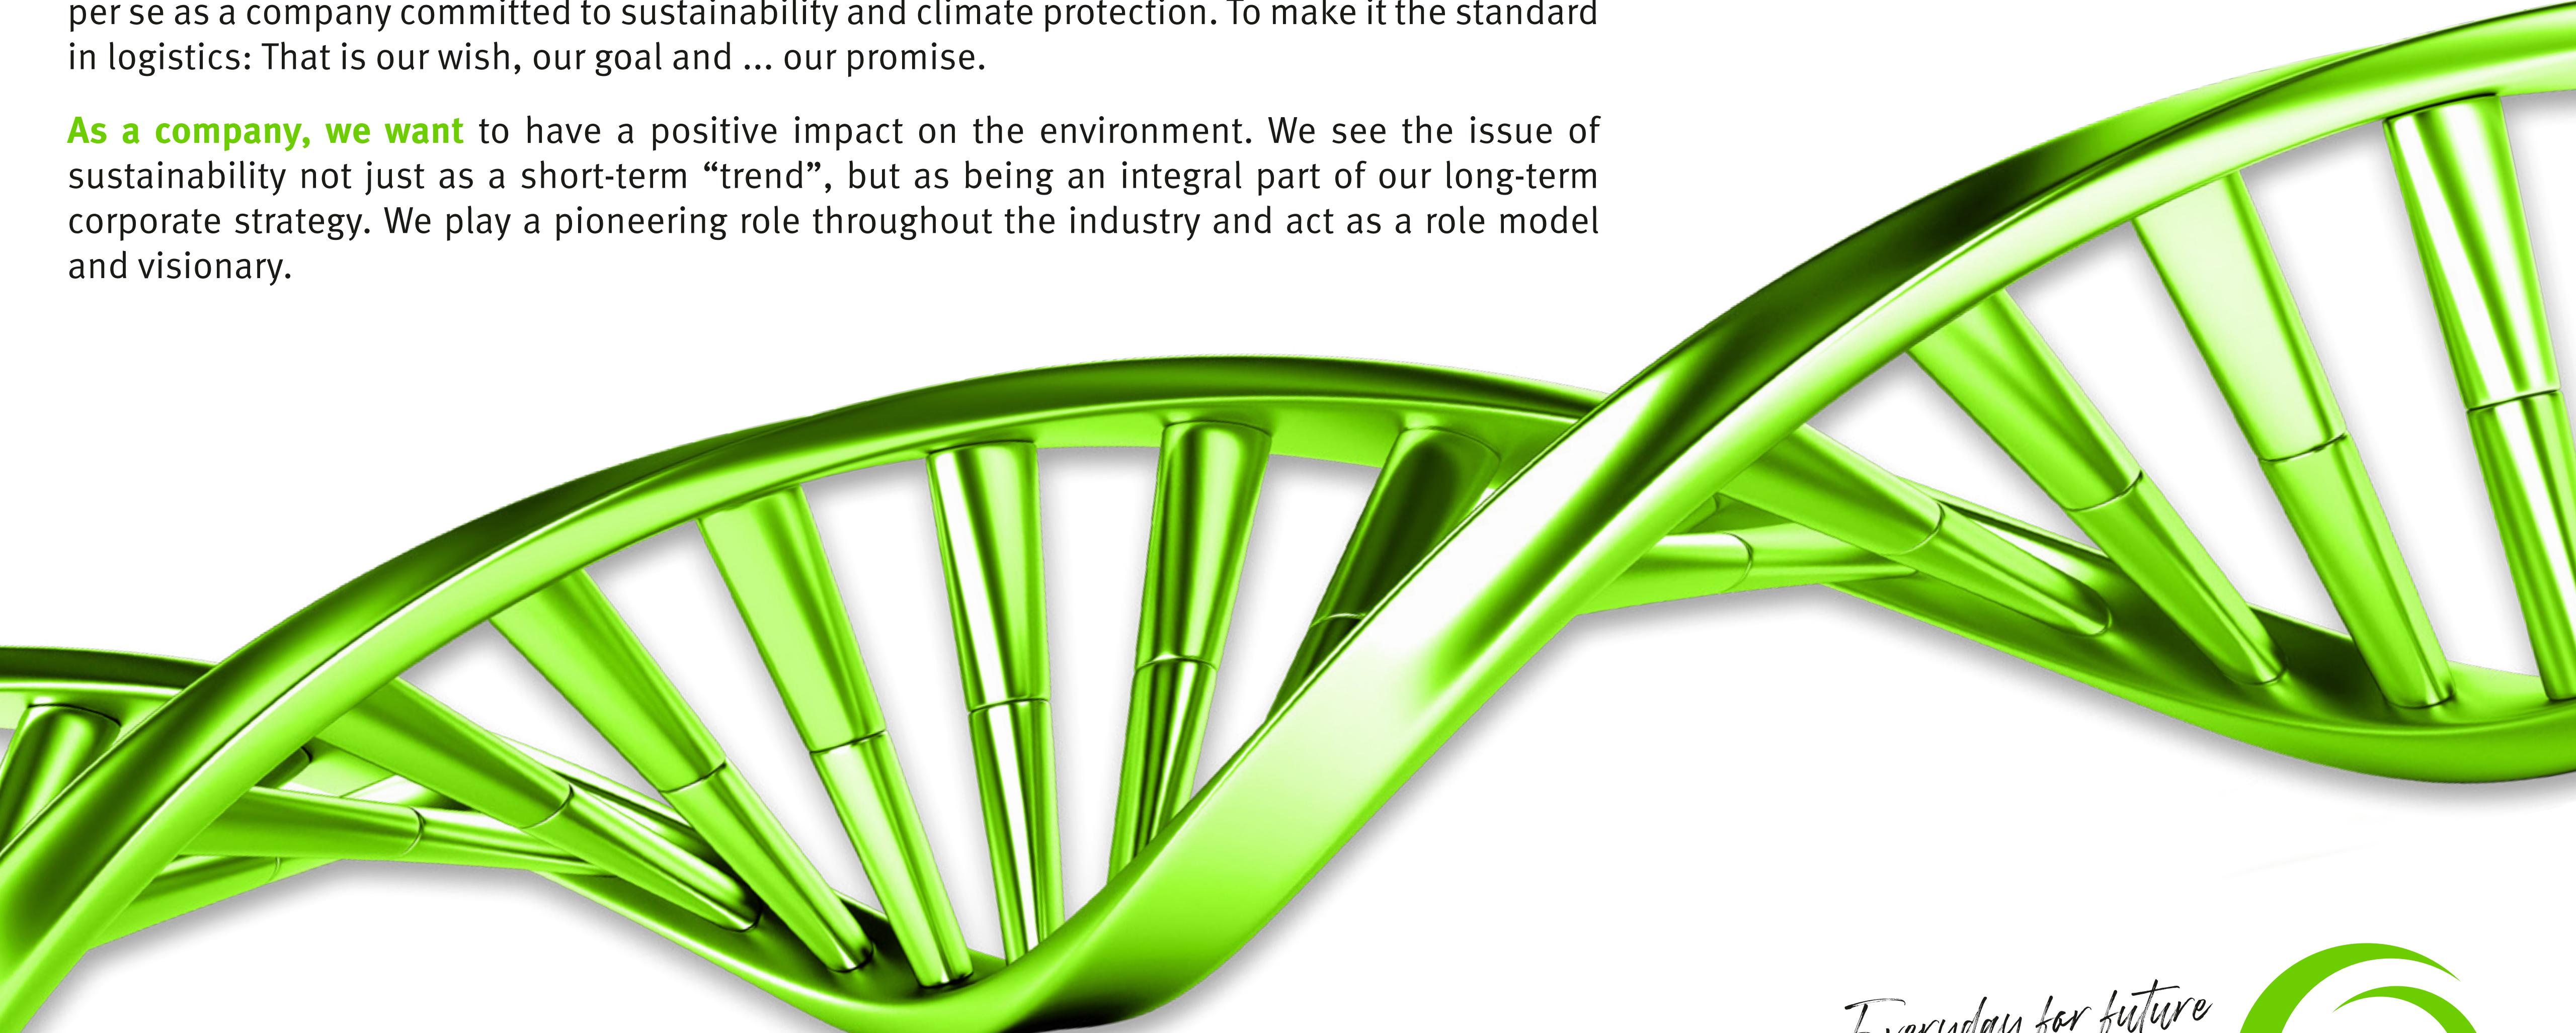

*Everyday for future*

**TXLOGISTIK**  
A company of the **MERCITALIA GROUP**

# OUR DNA IS „PURE GREEN“

**...because rail is by far the most environmentally friendly mode of transport.** That positions us per se as a company committed to sustainability and climate protection. To make it the standard in logistics: That is our wish, our goal and ... our promise.

**As a company, we want** to have a positive impact on the environment. We see the issue of sustainability not just as a short-term “trend”, but as being an integral part of our long-term corporate strategy. We play a pioneering role throughout the industry and act as a role model and visionary.

# IF NATURE HAD ONE WISH ...

**...rail would be the transport mode of choice.** As a railway company, we do everything we can to make that wish come true. Our first goal is to operationally strengthen rail freight transport, to shape the performance of European rail as best as possible, to convince our customers through quality. With a nationwide network and flexible route solutions, we are making it possible for more and more companies to opt for sustainability.

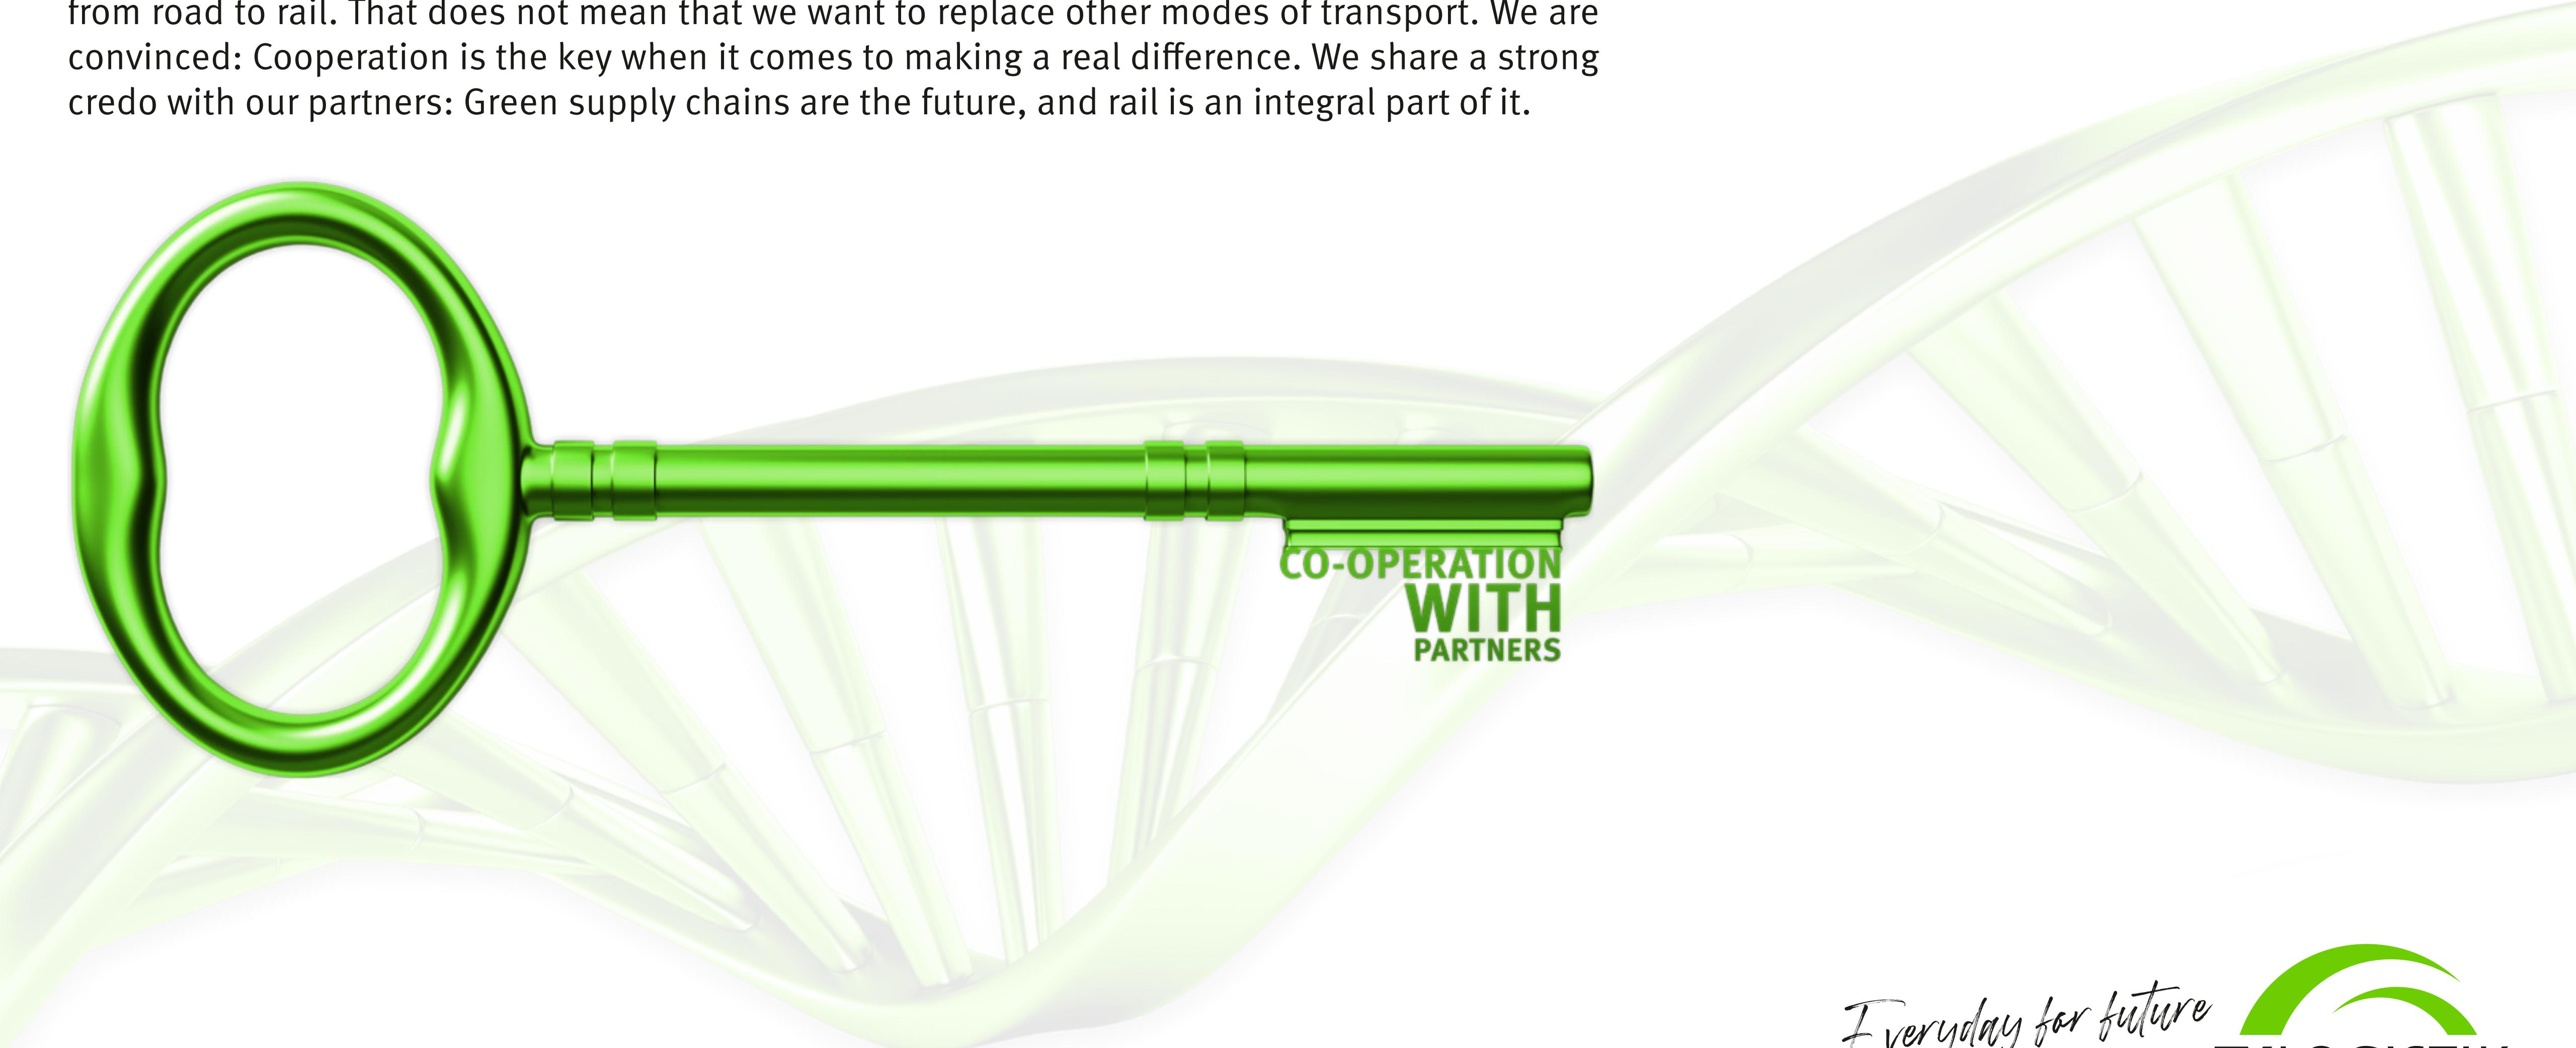

# IF NATURE HAD ONE WISH ...

We are **strengthening the positive effects** with our fleet and an innovative loading system. We only use state-of-the-art, energy-saving locomotives. And: With NiKRASA, we provide access to rail where it was not possible before: Non-craneable semi-trailers become craneable.

# IF NATURE HAD ONE WISH ...

Our goal is to change the modal split in the medium and long term by shifting more traffic from road to rail. That does not mean that we want to replace other modes of transport. We are convinced: Cooperation is the key when it comes to making a real difference. We share a strong credo with our partners: Green supply chains are the future, and rail is an integral part of it.

# IF NATURE HAD ONE WISH ...

**Nature benefits when** long distances are covered by rail. We translate that fact into intelligent concepts and offer the entire portfolio of conventional and combined transport by combining the strengths of the various modes of transport. Long distance by rail, short distance by road. That is „Green Excellence“. We act as an integrator: As a traction company, we enable companies to achieve their goals by rail. As an operator, we define efficient routes across all modes of transport and create green corridors throughout Europe together with our partners.

# TRANSFORMING OUR FOOTPRINT – EVERYDAY FOR FUTURE

Real change starts with a commitment from us and our clients. That is why corporate social responsibility is our focus, in which we support our customers and their customers in achieving their climate goals.

**Sustainability is our mindset.** Our 631 employees act EVERYDAY FOR FUTURE: Our transports are planned by people who think green, our drivers and our operational staff are ON THE MOVE ON BEHALF OF NATURE.
